

How to make Bitcoin Vault transactions using a Ledger Wallet?

Disclaimer: Please note that you can safely store your cryptocurrencies on your Ledger Wallet and Ledger Live app while simultaneously storing Bitcoin Vault thanks to the Electrum Vault Wallet. Your funds are safe, but remember to close one application before running the other to avoid functionality issues.

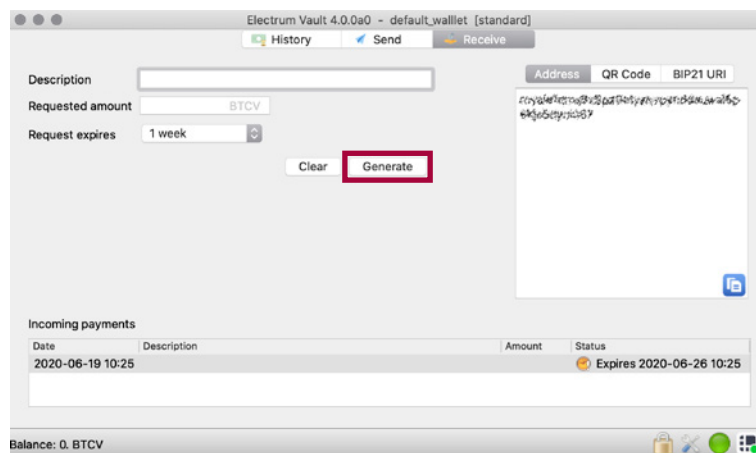

- (1) After the successful process of connecting the Ledger to Electrum Vault Wallet, the wallet will open and you are ready to use it.

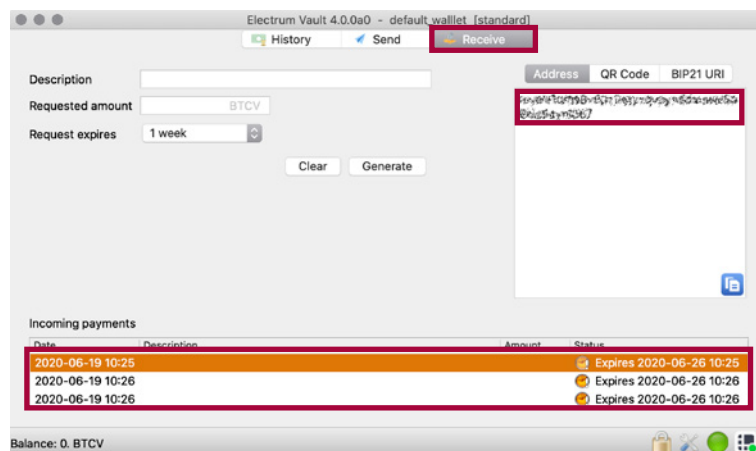

- (2) Now you will learn how to receive BTCV transactions on your Ledger Wallet.

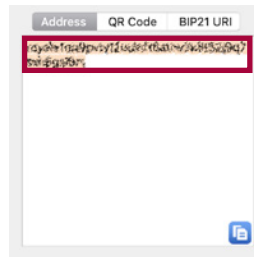

- (3) Select the “Receive” tab. Here you can generate a new receiving address for Bitcoin Vault. All of your BTCV addresses will be stored here. You can generate more than one address if you want. Just click “Generate”.

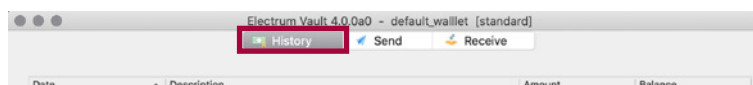

- (4) As you can see, the address is generated and displayed on the right side of the window. Below you have some data about each of the addresses that you own.

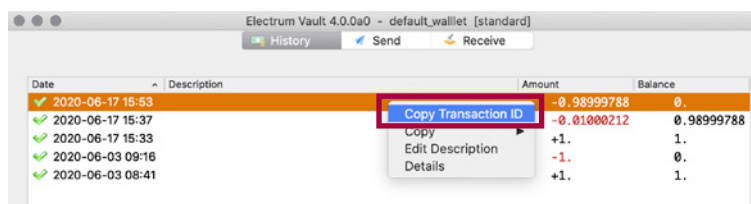

- (5) Copy this address and share it with the person or service so they can transfer the funds to your account. Double-check to ensure the address is correct. You can also use this address to withdraw BTCV from exchanges.

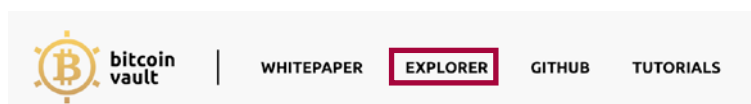

- (6) In the “History” tab you can check the transaction history. You will find all deposits and withdrawals here.

- (7) You can track each and every transaction in the Bitcoin Vault Explorer. Hover the mouse over the transaction in the Electrum Wallet, right-click and select “Copy Transaction ID”.

- (8) Then again open the bitcoinvault.global website and click “EXPLORER” on the top of the page.

- (9) Now paste the copied transaction ID to the search bar on the top of the page and click the “Enter” button on your keyboard.

- (10) Now you will be able to see all the information about the transaction, for example; status, amount of BTCV, address of sender and receiver, and so on.

Summary

Status
Unconfirmed

- (11) Now you want to send BTCV from your wallet to someone else. Go back to the Electrum Vault Wallet app and open the “Send” tab.

- (12) Insert the recipient's address in the "Pay to" field. Remember to verify the address.

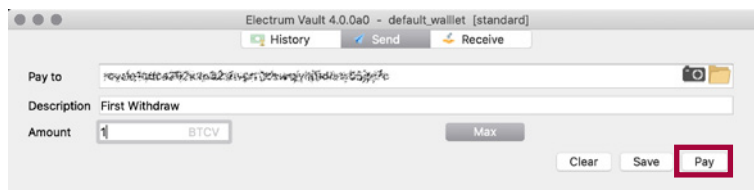

- (13) You can also add a description, for example: "First withdrawal".

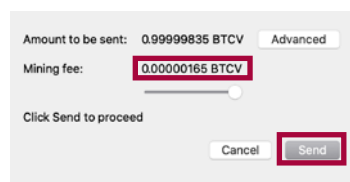

- (14) Specify the amount of BTCV that you want to withdraw and send. You can click "Max" to withdraw all BTCV from your wallet.

- (15) If all information regarding the payment is correct, click "Pay".

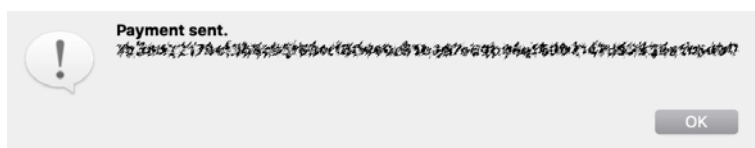

- (16) Now specify the mining fee for this transaction. You can change it or leave it as it is. When everything is correct, click "Send".

- (17) Now you need to confirm this transaction on your Ledger. Follow the instructions on the device carefully. Confirm all details by clicking the button on the right and the transaction will be processed.**

Confirm Transaction on your Ledger device...

The id of the wallet shown on the Ledger device will be different from the ID entered by the user in the application. Do not worry. This is normal and the process has been successful.

- (18) Now you can go to the "History" tab, select your transaction and copy its transaction ID.**

History			
Date	Description	Amount	Balance
Unconfirmed [rbf, 1.5 sat/b]	first withdraw	-0.01000212	0.98999788

- (19) You can check the details of this transaction. Go to the bitcoinvault.global website, select “EXPLORER”, paste the transaction ID into the search bar and click the magnifying glass icon or hit “Enter” button on your keyboard.
